

CASE STUDY: ADDITIONAL WAREHOUSE STORAGE

Lillian Vernon

The Challenge

Lillian Vernon wanted to maximize the square footage available in its existing distribution center, to be completed before the start of the upcoming holiday shopping season and without any downtime in existing areas.

Lillian Vernon

The Solution

PeakLogix was able to coordinate the building of 85 column footers, installation of a new 24,000 square feet mezzanine, and pouring of a concrete deck, all while the facility remained in operation.

The Results

The client saw a **15% increase in facility capacity**. With the additional space provided by the new mezzanine, more product lines can be accessed during the picking process, **increasing efficiency for the operation**. It also allows room for additional embroidering machines as the client's sales continue to rise.

PROJECT SPECS:

24,000 square feet added to the facility.

85 column footers supporting poured concrete deck.
