

CASE STUDY: SMARTPAK

Increased Pick Rates and Savings

The Challenge

SmartPak, a premier provider of horse supply and equine supplements, needed to increase the storage density and improve the tracking for their 19,000 SKUs of non-supplement products. At the same time, they needed to address inefficiencies in their layout and processes.

The Solution

PeakLogix upgraded SmartPak's static racking to a high density, automated horizontal carousel storage and retrieval system.

Key Results

With the new horizontal carousels, SmartPak realized more than 50% reduction in pick labor costs while increasing average pick rates from 35/hour to 150/hour. They reclaimed 30,000 square feet of floor space, improved their inventory tracking, and realized \$1.2 million in savings per year.
